

P250®

EVERYTHING CHANGES - EXCEPT THE QUALITY

“One out of many” is America’s motto, but an apt motto for the P250 would be “many out of one.” That’s because the P250 can be converted into dozens of configurations to suit the needs and fit the hands of virtually any shooter. With a modular fire control assembly that can be dropped into an assortment of grip module/slide combinations in four different calibers, the P250 can become the one pistol you need it to be.

P250 Caliber X-CHANGE™ Kit

The kit contains everything you need to exploit the P250 modularity and to reconfigure the pistol to any one of three sizes, in full size, compact, or subcompact models. It includes a slide, barrel, recoil spring, medium grip module and magazine and is available in 9mm, .357SIG, .40S&W and .45ACP.

SIGSAUER.COM

P250 SUBCOMPACT

trigger: DAO
sights: SIGLITE® night sights
slide finish: Natural stainless
frame finish: Polymer
calibers: 9mm, .357SIG, .40S&W or .45ACP
features: Slim snag-free profile

P250 FULL SIZE

trigger: DAO
sights: SIGLITE night sights
slide finish: Nitron®
frame finish: Polymer
calibers: 9mm, .357SIG, .40S&W or .45ACP
features: Integral accessory rail

Takedown in Seconds

1. Make sure the pistol is unloaded.
2. Remove the slide assembly.
3. Remove the takedown lever.
4. Pull back on the hammer, remove the fire control assembly.
5. Ready to reassemble.

SIGSAUER.COM

P250 COMPACT

trigger: DAO
sights: SIGLITE night sights
slide finish: Nitron
frame finish: Polymer
calibers: 9mm, .357SIG, .40S&W or .45ACP
features: Integral accessory rail

P250 COMPACT

trigger: DAO
sights: SIGLITE night sights
slide finish: Natural stainless
frame finish: Polymer
calibers: 9mm, .357SIG, .40S&W or .45ACP
features: Integral accessory rail

P250 SUBCOMPACT

trigger: DAO
sights: SIGLITE night sights
slide finish: Nitron
frame finish: Polymer
calibers: 9mm, .357SIG, .40S&W or .45ACP
features: Slim snag-free profile

SHARED FEATURES

Model Specifications: see pages 66-IBC

The P250 is offered in full, compact and subcompact models. • All are offered with SIGLITE night sights.
 • The stainless steel fire control assembly, the heart of the P250, fits easily into any polymer grip modules.

P250®

THE DEFINITION OF MODULARITY

Too often, versatility is achieved at the expense of excellence, but not with the P250. The serialized fire control module—the part that makes it a “gun”— can easily be switched between grips of different sizes and different calibers. Instead of one pistol, the P250 owner has a gun that can assume many configurations.

Modular Frame and Fire Control Assembly

The fire control assembly is the heart of the pistol and is serial-numbered. The number is visible through a window in the grip module, regardless of what grip module you choose to use.

Fire control assembly is shown at actual size, seated in the polymer grip module.

Short Trigger

Standard Trigger

P250 Short Trigger (optional)

Designed for shooters with smaller hands. Trigger length is shortened to enhance trigger manipulation for better shooting performance.

Fire Control Assembly

The stainless steel fire control assembly contains the parts that actuate the pistol and are contained as a single, modular unit that can be moved from one grip module to another.

FITTED TO THE TASK— AND THE SHOOTER

The two overriding questions that must be asked when purchasing a pistol are: How will it be used, and who is going to use it? The P250 makes those questions much less critical by being adaptable to a variety of tasks and a variety of shooters. It has the ability to be configured in everything from a full sized range pistol to a deep concealment weapon, in any one of four calibers. And, the selection of grip modules, coupled with a standard or short trigger, means it can be fitted to a wide range of hand sizes.

NEW! SIG SAUER P250 2SUM™

You can now get complete out-of-the-box versatility with the SIG SAUER P250 2SUM. This offer provides you with a full size P250, ideal for duty, home defense or sport, and all of the components to rapidly convert it to the P250 Subcompact, a perfect concealed carry gun.
